IMPLEMENTING NICE GUIDELINES

Coexisting severe mental illness and substance misuse: community health and social care services NICE guideline [NG58]. November 2016

Dr Raffaella Margherita Milani
Course Leader Substance Use and Misuse Studies
Context

• Groups covered in this guideline include:
young people (aged 14 to 25) and adults who have been
diagnosed as having a severe mental illness and who misuse
substances and who live in the community.
Context

Mental illness includes a clinical diagnosis of:

• schizophrenia, schizotypal and delusional disorders, or
• bipolar affective disorder, or
• severe depressive episodes with or without psychotic episode

Substance misuse refers to:

• the use of legal or illicit drugs, including alcohol and medicine in a way that causes mental or physical damage.
Community Health and Social Care Services

- Social Care
- Health
- Public Health
- Criminal Justice
- Voluntary and Community
- Housing

Community Health and Social Care Services
Recommendations: 6 areas

- First contact with services
- Referral to secondary mental health services
- Care plan: multiagency approach
- Partnership working
- Improving service delivery
- Maintaining contact
1.1 First contact with services

- Identify and provide support to people with coexisting severe mental illness and substance misuse. Aim to meet their immediate needs, wherever they present.
- Provide direct help, or get help from other services, for any urgent physical health, social care, housing or other needs.
- Ensure the person is referred to and followed up within secondary care, and that mental health services take the lead for assessment and care planning.
1.1.5

Ensure the safeguarding needs of all people with coexisting severe mental illness and substance misuse, and their carers and wider family, are met.

de Waal et al. (Nov 2017) Factors associated with victimization in dual diagnosis patients, *Journal of substance Abuse treatment*

- 243 patients with dual diagnosis seeking treatment in Amsterdam
- Overall: violent victimization was independently associated with younger age, female gender, violent offending and a self-sacrificing and overly accommodating interpersonal style

Females:
homelessness, violent offending, a domineering/controlling interpersonal style
Males:
Younger age, violent offending and a self-sacrificing and overly accommodating interpersonal style.

Conclusion:
Interventions should build interpersonal skills and be gender specific
1.2 Referral to secondary care mental health services

- Do not exclude people with severe mental illness because of their substance misuse.
- Do not exclude people from physical health, social care, housing or other support services because of their coexisting severe mental illness and substance misuse.
Undertake a comprehensive assessment of the person's mental health and substance misuse needs.

Assessment of substance misuse in mental health services

Assessment of mental health in substance misuse services
Assessment of substance misuse in mental health services

- Alcohol and drug misuse was a common antecedent of patient suicide, between 45% and 63% (alcohol) and between 33% and 45% (drugs), but only a minority of patients were in contact with substance misuse services. (National Confidential Enquiry ..., 2016).

- NPS (Novel Psychoactive Substances or former Legal Highs) changed the drug scene. “Club drugs need a different response from UK treatment providers” (The Royal College of Psychiatrists, 2014).

- Should there be routine substance “use” / ”misuse” assessment? What tools should be used?

- Professional curiosity
Involving the person (and their family or carers if the person wants them involved) in developing and reviewing the care plan (as needed) to ensure it is tailored to meet their needs.

Ensure the care coordinator works with other services to address the person's social care, housing, physical and mental health needs, as well as their substance misuse problems.

Consider incorporating activities in the care plan that can help to improve wellbeing and create a sense of belonging or purpose.

Ensure carers (including young carers) who are providing support are aware they are entitled to, and are offered, an assessment of their own needs.
1.4 Partnership working between specialist services, health, social care and other support services and commissioners

- 1.4.2 Ensure joint strategic working arrangements are in place

- Agree a protocol for information sharing

- “working across traditional institutional boundaries”
1.3 The care plan: multi-agency approach to address physical health, social care, housing and other support needs

- **Practical one-to-one support**, for example in relation to housing, education, training or employment

- Support at appointments

- Ensure agencies and staff communicate with each other so the person is not automatically discharged from the care plan because they missed an appointment. All practitioners involved in the person's care should discuss a non-attendance.
Discharge and transition

- Providers share information on how to manage challenging or risky situations (see also NICE's guideline on violence and aggression: short-term management in mental health, health and community settings).

- “most patients convicted of homicide also have a history of alcohol or drug misuse, between 88% in England and 100% in N Ireland.”

- “greater focus on alcohol and drug misuse is required as a key component of risk management in mental health care, with specialist substance misuse and mental health services working closely together”

(National Confidential Inquiry into Suicide and Homicide by People with Mental Illness (NCISH), 2017 report)
1.6 Maintaining contact between services and people with coexisting severe mental illness and substance misuse who use them

- Flexibility
- staying in contact by using the person's chosen method of communication (for example, by letter, phone, text, emails or outreach work, if possible).
- Perseverance
Support for staff

1.5.10 Ensure the care coordinator in secondary care mental health services is supervised and receives professional development to provide or coordinate flexible, personalised care.

1.5.11 Recognise that different attitudes towards, or knowledge of, mental health and drug- or alcohol-related problems may exist between agencies and that this may present a barrier to delivering services.

1.5.12 Ensure practitioners have the resilience and tolerance to help people with coexisting severe mental illness and substance misuse through a relapse or crisis, so they are not discharged before they are fully equipped to cope or excluded from services.
From Intention to action

Implementation
Internal and external communication

Identify elements that staff can implement straight away

Raise awareness

Motivate others
Identify local issues

Identify leads

Identify gaps in the current provision

Assessment against recommendations

Plan how to collect the data

Identify data to measure improvement

Milestones and business case
Action plane Project group

Develop an action plan

With oversight of lead/project groups/management

Implement the action plan

ON going motoring
Share progress internally and with commissioners, stakeholders and local partners

Review and monitor

| Front sheet | Introduction | Data sheet |
Wheel of Behaviour Change

- Capability
- Motivation
- Opportunity

Barriers to NICE implementations (survey on 683 clinicians and managers)

- Gaining consensus with colleagues: 42%
- Resources: training/new skills: 14%
- Lack of funding: 15%
- Resources: services/equipment: 12%
- Lack of time: 9%
- Other: 8%

• According to the NMC (Nursing and Midwifery Council), between March 2016 and May 2017, 5,047 nurses left the profession outside of the retirement age because of unrealistic pressures, stress and poor management support.

• Mental health nursing is one of the professions most at risk of “burn out” (or “compassion fatigue”).
Community resources: Peer support

- 170 members
- Social network mapping
- 1 manager, 4 PT workers
- Person centered, non-directive
Examples of good practice

Slough Mental Health Services

• Extensive training on drug awareness, attitude and substance misuse assessment, included in the cquin targets, 158 staff at all levels participated from 8 localities of Berkshire Healthcare NHS Foundation Trust

• Family member as family liaison worker
• One member of staff responsible for employment
• Peer support programme: embrace
• Thinking outside the box (theatre group and choir including both staff and service users, collaboration with an Italian programme of sport in mental health recovery).
Mental Health day 2016
Professional Curiosity

• Trying to force a serial approach model may constitute a barrier to a client centered approach.

• Curiosity means to be open to the unexpected and to welcome information that may not support the initial assumptions.

• Organizational culture
